Note:		
All SSR's should be protected by fast acting "semiconductor" fuses.		
Circuit breakers and normal fuses are not quick enough to protect the SSR in the event of a current surge or spike"		
It is recommended that load power is kept to no more than 70% of the SSR's rating to avoid unexpected issues in the event of variations in the load and ambient temperature" These SSR's are designed to be used with a suitable heat sink.		
Transfer Pads and Heatsinks for Durakool SSR relays can be found in Durakool's Solid State Relay (SSR) catalogue.
